According to our (Global Info Research) latest study, the global Spray Polyurethane Foam (SPF) and One Component Foam (OCF) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Spray polyurethane foam (SPF) is a versatile building material that can be applied to a range of surfaces and irregular shapes in situ to provide thermal and acoustic insulation.

Available in pressurized cans at retail locations, methylene diphenyl diisocyanate (MDI)-based one component polyurethane foam (OCF) is a self-expanding, self-adhesive, moisture-curing gap filler. This type of polyurethane insulation is used around doors and window jams in construction projects, as well as gaps around pipes, television cables, outdoor vents, soffits and more. One component foam reduces air leakage in buildings by completely sealing air infiltration points.

OCF bonds quickly to a variety of substrates including wood, masonry, metal, glass and many plastics. This fast-curing material hardens into a protective plastic foam that prevents air and moisture infiltration. When completely cured, OCF can be cut, sanded, plastered over and painted.'
