Abstracts

Spring Actuated Brake is also known as a 'power-off engaged' brake. A spring actuated electromagnetic brake provides reliable braking when the power is disengaged, and excellent performance in long-term holding applications. In a spring actuated, or spring applied brake, compression springs push the armature plate into the rotor disc to halt and hold movement when power is disengaged. This feature provides fail-safe braking, and allows the brake to maintain position over long periods of time, thus preventing machinery from "coasting" when powered off.

According to our (Global Info Research) latest study, the global Spring Actuated Brake market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
