According to our (Global Info Research) latest study, the global Spring Fastening Brake market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Spring fastening brake is a kind of equipment which uses the spring principle to realize the braking function. It is usually composed of a spring, a brake disc, a brake friction plate and a release device. When it is necessary to brake, the release device releases the pressure of the spring, making the brake friction disc contact with the brake disc, and generating friction resistance, thereby slowing down or stopping the movement of the mechanical equipment.
