The global Spring Fastening Brake market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Spring fastening brake is a kind of equipment which uses the spring principle to realize the braking function. It is usually composed of a spring, a brake disc, a brake friction plate and a release device. When it is necessary to brake, the release device releases the pressure of the spring, making the brake friction disc contact with the brake disc, and generating friction resistance, thereby slowing down or stopping the movement of the mechanical equipment.
