## Abstracts

The global Spring Insert Type Locknut market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Spring insert lock nut is a fastener used to fix bolts or screws in place. It consists of a threaded metal nut and a specially designed insert made of spring steel or other high-strength materials. The insert is a small coil spring placed inside the nut to prevent loosening by generating a constant tension between the nut thread and the bolt or screw. The design of the spring insert lock nut makes it easy to install manually without special tools or equipment. Screw the nut onto the bolt or screw until it is tightened by hand, and then press the spring insert onto the thread of the bolt or screw when further tightening the nut. This forms a safe and vibration-resistant connection to prevent the nut from falling off or loosening over time.
