Spring Water refers to water that naturally flows to the surface from underground sources, typically filtered and mineralized through layers of rock and soil. It is characterized by its clarity, natural mineral content, and purity. Spring water is naturally sourced and usually undergoes minimal processing, such as basic filtration and sterilization (e.g., ozone or UV treatment) to ensure safety while preserving its original composition. Depending on the geological conditions, the mineral content and taste of spring water can vary, offering health benefits like mineral replenishment, metabolism support, and digestive improvement.
