## Abstracts

The global Sprocket market size is expected to reach \$ 537 million by 2032, rising at a market growth of 2.6% CAGR during the forecast period (2026-2032).

Sprockets are teeth like projections arranged on a wheel rim to engage the links of a chain. They engage chains in many different power transmission and conveyor systems. They are mainly made of cast iron, sintered metal and carbon steel. Inserted sprockets are also designed to reduce noise and operation. The sprocket must be inspected once a month for wear and if the teeth are worn down or are broken they should be replaced. They are often an economic, reliable drive system for long running, continuous drive applications with maximum absorption of shock and minimum torque loads.

Asia-Pacific is the largest region of Sprocket, with a market share about 50%, followed by Europe and North America, etc. Tsubaki, Martin Sprocket & Gear, SCS, Katayama, Linn Gear and SKF are the top 6 manufacturers of industry, and they had about 20% combined market share.

This report studies the global Sprocket production, demand, key manufacturers, and key regions.
