According to our (Global Info Research) latest study, the global SPST Time Delay Relay market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Single pole single throw time delay relay is an electrical control device, which is often used to control the switch of electrical equipment in a circuit, and has a time delay function. It has only one output channel, including a switch, which can control the switch state of a circuit. The main feature of the SPST time-delay relay is that it has a delay function, which can delay the switching operation for a period of time after being triggered. It usually consists of a control unit and a relay output. The control unit contains a timer and a trigger, and the delay time and trigger conditions can be set according to the user#####s needs. When the trigger condition is met, the control unit sends a signal to the relay output, and the relay output switches the state of the switching circuit.
