According to our (Global Info Research) latest study, the global Spur Gear Planetary Reducer market size was valued at US\$ 692 million in 2024 and is forecast to a readjusted size of USD 797 million by 2031 with a CAGR of 2.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A spur gear planetary reducer is a planetary reduction device using a spur gear structure, which achieves the functions of deceleration and torque increase through the meshing of multiple gears. Compared with the helical planetary reducer, the spur planetary reducer has a smaller axial force when the gears are meshed, a simpler structure, and a lower manufacturing cost, but it has greater noise and vibration during operation, so it is more suitable for occasions where precision and noise requirements are not high.
