According to our (Global Info Research) latest study, the global Sputter Targets market size was valued at USD 4695.7 million in 2023 and is forecast to a readjusted size of USD 5198.7 million by 2030 with a CAGR of 1.5% during review period.

Sputtering is a technology used to form a thin film on a silicon wafer, glass, or other substrate. Within a vacuum state maintained in a sputtering machine, a sputtering target is bombarded with argon ions. This causes atoms or molecules to be emitted from the sputtering target. The atoms or molecules are deposited and form a thin film on the substrate. A sputtering target is the object of the ion bombardment when sputtering takes place.

Global core sputter targets manufacturers include Materion (Heraeus), JX Nippon Mining & Metals Corporation etc. The top 5 companies hold a share about 44%. Asia Pacific is the largest market, with a share about 83%, followed by Americas and Europe with the share about 10% and 5%. In terms of product, metal targets is the largest segment, with a share about 60%. And in terms of application, the largest application is semiconductor, followed by flat panel display.
