According to our (Global Info Research) latest study, the global Sputtering Equipment for Millimeter Wave Radar market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Sputtering Equipment for Millimeter Wave Radar uses a special material to form a base layer of organic thin film on the surface of the material, and coats it with chromium by sputtering. When it is heated, a difference in stress occurs due to the difference in thermal expansion coefficients of the organic film and the chromium film, and extremely fine cracks are generated in the chromium film. These cracks allow transmission of millimeter waves.
