A square crossflow cooling tower is a type of open cooling tower with a square structure and a crossflow air configuration. In this design, warm water is distributed from the top and flows downward through fill media, while air enters horizontally from the sides, enabling heat transfer through direct contact and partial evaporation. This type of tower offers advantages such as uniform water distribution, easier maintenance access, and relatively lower noise, making it ideal for commercial buildings, industrial facilities, and HVAC systems requiring reliable thermal performance.
