According to our (Global Info Research) latest study, the global Square Silicon Cores market size was valued at US\$ 1069 million in 2024 and is forecast to a readjusted size of USD 1679 million by 2031 with a CAGR of 6.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Square silicon core? refers to the heat carrier used to deposit polysilicon during the reduction reaction in the reduction furnace during the Siemens and silane polysilicon production processes. The square silicon core is made by wire cutting technology and has a square shape. In polysilicon production, square silicon cores, due to their large surface area, high strength, and good thermal stability, can increase the rate and efficiency of the reduction reaction, reduce the furnace turnover rate and power consumption, thereby reducing production costs.
