## Abstracts

According to our (Global Info Research) latest study, the global SQUID(Superconducting Quantum Interference Device) Magnetometer market size was valued at US\$ 129 million in 2024 and is forecast to a readjusted size of USD 187 million by 2031 with a CAGR of 5.5% during review period.

SQUID magnetometer is a kind of highly sensitive magnetic field measuring instrument based on superconducting quantum interference effect . The core component of SQUID magnetometer is a superconducting ring structure containing Josephson junction, which can detect the smallest unit of magnetic flux variation. The device takes advantage of the zero resistance properties of superconducting materials at extremely low temperatures to achieve magnetic field resolution on the order of Piethlaus by measuring changes in the current of the superconducting ring caused by magnetic fields.
