A Squirrel-cage Induction Motor with Cast Copper Rotors is a type of asynchronous motor that uses a copper rotor in place of the traditional aluminum rotor. This motor operates by inducing an electromagnetic field in the rotor, which interacts with the stator's rotating magnetic field to produce torque and rotation. Due to copper's lower resistivity compared to aluminum, motors with cast copper rotors achieve higher efficiency, reduced power loss, and lower operational temperatures, making them well-suited for high-performance, energy-efficient applications in industries such as HVAC, industrial automation, electric vehicles, and renewable energy systems.
