According to our (Global Info Research) latest study, the global SSL Devices market size was valued at USD 63310 million in 2023 and is forecast to a readjusted size of USD 79210 million by 2030 with a CAGR of 3.3% during review period.

Solid-state lighting (SSL) refers to a type of lighting that uses semiconductor light-emitting diodes (LEDs), organic light-emitting diodes (OLED), or polymer light-emitting diodes (PLED) as sources of illumination rather than electrical filaments, plasma (used in arc lamps such as fluorescent lamps), or gas.

Solid state lighting system application has replaced the conventional incandescent and fluorescent lamps for general lighting purposes. Solid state lighting has the potential to revolutionize the lighting market with the introduction of energy-efficient light sources. Conventional incandescent bulbs are expected to attain obsolescence with the arrival of high brightness LEDs. Solid state lighting technology demand is anticipated to increase at a fast pace with continuous improvements in light quality, efficacy, and operating life.
