## Abstracts

Companies use SSL & TLS certificates to ensure their website provides visitors with encrypted, private browsing. SSL (secure sockets layer) and TLS (transport layer security) are standard methods of initiating encrypted connections between servers and clients. SSL & TLS connections are established based on SSL & TSL certificates, which generate unique encryption keys to create encrypted links between sites and visitors.

SSL & TLS certificates solutions generate and provide companies with certificates for visitors across their site. Companies use these tools to both ensure the security of their visitors' information and to abide by current standards put forward by search engines. Sites without SSL or TLS may be penalized or not appear in major search engines, which will inevitably impact site traffic.

SSL & TLS certificate technology relies on the same principles as many encryption software products. However, SSL & TLS certificate solutions are unique to website browser and visitor security and will offer very different functionality than generalized encryption tools.
