## Abstracts

The global Stacked Surface Mount Magnetic Bead market size is expected to reach \$ 1835 million by 2032, rising at a market growth of 9.9% CAGR during the forecast period (2026-2032).

Stacked surface mount magnetic beads (SMD beads) are chip-level electromagnetic interference (EMI) suppression components made of sintered multilayer ferrite ceramics with internal conductive electrodes. They are primarily used to suppress high-frequency noise and EMI, exhibiting high impedance to high-frequency interference while allowing DC signals to pass through. SMD beads are widely used in circuits for smartphones, laptops, servers, communication equipment, automotive electronics, industrial control, and consumer electronics. Global SMD bead sales are projected to reach approximately 290 billion units by 2025, with an average unit price of approximately US\$0.0033 and a capacity utilization rate of approximately 83%. Upstream suppliers primarily include manufacturers of ferrite powder, silver paste, internal electrode metal materials, ceramic substrates, chemical additives, and stacking sintering equipment. Downstream suppliers include passive component distributors, EMS foundries, consumer electronics OEMs, Tier 1 automotive electronics suppliers, communication equipment manufacturers, and server and network equipment manufacturers. The industry's gross margin is approximately 28%. In the product cost structure, ferrite and ceramic raw materials account for approximately 35%, silver paste and internal electrode materials account for approximately 22%, energy and sintering depreciation account for approximately 18%, and labor and manufacturing costs account for approximately 10%. Testing, sorting, and yield losses account for approximately 8%, and logistics and management costs account for approximately 7%. Demand primarily comes from smart terminal motherboards, 5G and WiFi communication modules, server motherboards, power management modules, and new energy vehicle in-vehicle electronic equipment and

ADAS control units. Downstream customers include leading mobile phone brands, server OEMs, communication equipment manufacturers, automotive electronic system suppliers, and large EMS manufacturers. Business opportunities stem from the growing demand for electromagnetic interference suppression due to the high-frequency and high-speed characteristics of electronic products, the increasing penetration rate of automotive electronics and new energy vehicles, national policies supporting the localization of information infrastructure and automotive-grade electronic products, and the continuous changing demands of end users for thinner, more compact, and more reliable electronic products.
