Stacker cranes for pallets are automated or semi-automated material handling machines used primarily in warehouses and distribution centers for the storage and retrieval of palletized goods. Operating within racking systems, these cranes move both vertically and horizontally along fixed tracks to efficiently place or extract pallets from designated storage locations. Equipped with forks or similar lifting mechanisms, stacker cranes enhance inventory management by increasing storage density, reducing labor costs, and improving accuracy and speed in high-volume operations. They are a key component in automated storage and retrieval systems (AS/RS) and are widely used in industries that require precise and efficient logistics operations.
