Stage control system is a central control system used to control and manage various stage equipment (such as lighting, audio, video, mechanical devices, etc.) during stage performances. It usually consists of two parts: hardware and software. The hardware part includes consoles, signal transmission equipment, etc., while the software part is responsible for functions such as data processing, scene setting, and device linkage. The stage control system can achieve precise control and flexible scheduling of stage equipment, ensuring that all aspects of the performance process work closely together to present the best stage effect. At the same time, it can also improve the safety and reliability of performances and reduce operating difficulty and costs. With the development of science and technology, modern stage control systems are developing in a more intelligent, networked and integrated direction.
