Abstracts

The global Stainless Steel Dryer market size is expected to reach \$ 407 million by 2032, rising at a market growth of 3.3% CAGR during the forecast period (2026-2032).

In 2025, the global production of stainless steel dryers reached 86,655 units, with an average selling price of US\$3,650 per unit. The global annual production capacity of stainless steel dryers was approximately 120,000 units, with a gross profit margin of approximately 23.2%. Stainless steel dryers are drying equipment made of stainless steel, primarily used for drying various materials. They offer advantages such as corrosion resistance, high-temperature resistance, and hygiene. They are widely used in the food, pharmaceutical, chemical, and electronics industries, especially in applications requiring high hygiene and corrosion resistance. The upstream of the stainless steel dryer industry includes stainless steel materials and plates/profiles, high-temperature seals and connectors, and heating/heat exchange components. The midstream consists of stainless steel dryer manufacturers, while downstream applications are mainly in industrial, laboratory, and medical sectors.

The current market situation for stainless steel dryers generally exhibits characteristics of 'steady growth, product differentiation, and application-driven growth.' On the one hand, the increasing demand for drying uniformity, cleanliness, corrosion resistance, and ease of cleaning (CIP/SIP requirements) in industries such as chemicals, food, pharmaceuticals, and lithium battery materials means that stainless steel dryers remain highly competitive due to their corrosion resistance and hygienic properties. On the other hand, the market is also rapidly segmenting. General-purpose equipment is more significantly affected by price and homogenization, while 'process-oriented' equipment with capabilities such as high-precision temperature and humidity control, energy-saving recovery, closed-loop air duct design, and vacuum/inert atmosphere is more likely to

secure orders. Overall, the current industry is largely driven by downstream process upgrades and environmental/energy efficiency policies, but demand release exhibits structural and phased characteristics due to fluctuations in raw material prices, project bidding schedules, and customer verification cycles.

This report studies the global Stainless Steel Dryer production, demand, key manufacturers, and key regions.
