## Abstracts

The global Stainless Steel Magnetic Drive Pump market size is expected to reach \$ 712 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Stainless steel magnetic drive pump is composed of three parts: pump, magnetic drive and motor. Stainless steel magnetic pump is composed of three parts: pump, magnetic drive and motor. When the motor drives the outer magnetic rotor to rotate, the magnetic field Through the air gap and non-magnetic material, it drives the inner magnetic rotor connected to the impeller to rotate synchronously, realizes the non-contact transmission of power, and converts the dynamic seal into a static seal. The average price is about \$4,000 per unit, and the global sales volume is about 120,000 units.

Stainless steel magnetic drive pumps offer the advantage of combining corrosion resistance with structural strength, making them suitable for a wide range of applications including chemical, petrochemical, pharmaceutical, food processing, and water treatment. They can maintain stable operation under medium-high temperature and medium-high pressure conditions. Upstream supply relies on neodymium iron boron magnets and stainless steel materials, midstream manufacturers meet demand through large-scale production of 30,000-50,000 units per line per year, and downstream customers cater to high-frequency industrial applications. Future trends favor more efficient energy coupling, more intelligent monitoring (temperature and vibration sensing), and green recycling materials. Stainless steel magnetic drive pumps will continue to maintain their dominant position in the mid-to-high price range. This report studies the global Stainless Steel Magnetic Drive Pump production, demand, key manufacturers, and key regions.
