Abstracts

The global Stainless Steel Plasma Extractor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The industry trend for stainless steel plasma extractors is moving towards improved efficiency, automation, and user safety. Manufacturers are developing extractors with enhanced speed and precision in plasma separation, as well as features such as automated controls and integrated safety mechanisms to minimize the risk of exposure to bloodborne pathogens. Additionally, there is a focus on compact, space-saving designs and the integration of digital interfaces and connectivity for seamless data management and process monitoring.

A stainless steel plasma extractor is a medical device used for the separation of blood components, particularly plasma, from whole blood. It is made of durable, corrosion-resistant stainless steel and consists of a centrifuge chamber and a mechanism for separating plasma from other blood components. The device applies centrifugal force to isolate and extract plasma, allowing for further processing or analysis. Stainless steel construction ensures sterility and durability, making it suitable for clinical, laboratory, and blood bank settings.
