Stainless steel rotary gates are mechanical devices made primarily of stainless steel that achieve opening, closing, and flow control through a rotating structure. They are characterized by corrosion resistance, high strength, and excellent sealing performance, and are widely used in water conservancy, municipal, environmental protection, and industrial fluid systems to achieve media interception, regulation, and safety control.

Upstream applications mainly include raw materials and basic components such as stainless steel plates, profiles, sealing materials, bearings, motors, and reducers. Downstream applications are concentrated in water conservancy projects, municipal water supply and drainage, sewage treatment, chemical, power, and industrial pipeline networks, serving fluid transport and control systems.

The global unit price of a stainless steel rotary gate is US\$613, with annual sales of approximately 209,000 units and a global annual production capacity of approximately 220,000 units. The industry profit margin is 20%.
