Abstracts

The global Stainless Steel Sanitary Screw Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The sanitary grade screw pump is a kind of single-screw delivery pump. Its main working parts are the screw bushing (called the stator) of the screw (called the rotor) and the inner surface of the eccentric spirochete and the double-wire helicoid. Its working principle is that when the motor drives the pump shaft to rotate, the screw rotates around its own axis on the one hand, and on the other hand it rolls along the inner surface of the bushing, thus forming a sealed chamber of the pump. Every time the screw rotates once, the liquid in the sealing chamber advances one pitch forward. With the continuous rotation of the screw, the liquid is pressed from one sealing chamber to another in a spiral manner, and finally squeezed out of the pump body.

This report studies the global Stainless Steel Sanitary Screw Pump production, demand, key manufacturers, and key regions.
