According to our (Global Info Research) latest study, the global Stainless Steel Single Screw Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Stainless steel single-screw pump is a kind of single-screw delivery pump, its main working parts are the screw bushing (called stator) of the screw of eccentric spirochete (called rotor) and the inner surface being the bifilar helicoid. Its working principle is that when the motor drives the pump shaft to rotate, the screw rotates around its own axis on the one hand, and on the other hand it rolls along the inner surface of the bushing, thus forming a sealed chamber of the pump. Every time the screw rotates one revolution, the liquid in the sealing chamber advances one pitch forward, and with the continuous rotation of the screw, the liquid is pressed from one sealing chamber to another in a spiral manner, and finally squeezed out of the pump body. The screw pump is a new type of machine for conveying liquids. It has the advantages of simple structure, safe and reliable operation, convenient use and maintenance, continuous and uniform liquid discharge, and stable pressure.
