A stainless steel surface treatment is a surface treatment that takes advantage of stainless steel's property of forming a film called passive film.

Stainless steel is an alloy steel that is composed mainly of iron and contains 11% or more chromium. The passive film of stainless steel does not oxidize, so corrosion inside the metal does not occur.

Rust is described as a stain, and stainless steel is called stainless because it does not rust. Stainless steel is not only rust-resistant but also strong. It is used in various fields by surface treatment.
