According to our (Global Info Research) latest study, the global Stainless Steel Survival Knives market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Steel survival knives are usually made from high carbon steel, stainless steel, or special alloy steels. These steels have excellent hardness and wear resistance, and can maintain their sharpness and prolong their service life in harsh outdoor environments. Stainless steel is more rust-resistant, but it is also more difficult to sharpen and is generally not as tough as carbon steel. Due to stainless steel's rust resistance, if you are in an environment with frequent moisture (for example, marine salt water environment, swamps, marshes), you may need a stainless steel blade.
