Standby Uninterruptible Power Supply is a type of power protection system that provides backup power to connected devices in the event of a power outage or other power-related issues. Standby UPS typically operates in a 'standby' mode, where it remains idle and the connected devices are powered by the main utility power. When a power outage occurs, the Standby UPS quickly switches to battery power to provide uninterrupted power to the connected devices. The switch to battery power usually takes only a few milliseconds, and during this time, the connected devices remain powered on without any interruption.
