## Abstracts

According to our (Global Info Research) latest study, the global Star Anise Fruit Extract market size was valued at US\$ 41.00 million in 2025 and is forecast to a readjusted size of US\$ 57.41 million by 2032 with a CAGR of 5.0% during review period.

Star Anise Fruit Extract is a concentrated natural flavor ingredient derived from the dried fruit (pods) of Chinese star anise, *Illicium verum*. It is typically produced via solvent extraction, supercritical CO<sub>2</sub> extraction, or distillation to obtain a volatile fraction, and is used to deliver the characteristic sweet, licorice-like star-anise note. In many commercial forms, the aroma profile is strongly linked to the volatile fraction rich in trans-anethole, while some standardized products may also emphasize non-volatile actives.

Upstream, the supply chain starts with cultivation/harvesting and drying of *Illicium verum* fruits, followed by cleaning, milling, and extraction inputs such as ethanol/water or CO<sub>2</sub>, plus carriers and food-grade packaging. A key quality-control requirement is botanical authentication to prevent confusion with toxic Japanese star anise, which has been documented as a safety issue in trade channels. Downstream, manufacturers sell it to flavor houses and food producers for seasonings, soups/broths, meat marinades, bakery and beverage flavoring; in parallel, star-anise derived constituents are also used in fragrance and personal care.

In 2025, global sales of Star Anise Fruit Extract reached approximately 407 tons, with an average global market price of around US\$ 98/kg. The gross profit margin is approximately 25%-40%.
