Starch-based biodegradable plastics are eco-friendly materials derived from natural starch sources, such as corn, potatoes, or wheat. These plastics are designed to break down more easily in the environment compared to traditional petroleum-based plastics. Starch serves as the primary polymer in these materials, often blended with other biodegradable substances like polylactic acid (PLA) or polyhydroxyalkanoates (PHA) to enhance performance and durability. Due to their biodegradable nature, starch-based plastics are commonly used in packaging, disposable cutlery, and agricultural films. They offer a sustainable alternative to conventional plastics, helping reduce pollution and reliance on fossil fuels.
