## Abstracts

According to our (Global Info Research) latest study, the global Starch-Derived Fiber market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Starch-derived fiber refers to a type of dietary fiber obtained from starch-rich plant sources like corn, wheat, or potatoes through advanced enzymatic or chemical processes. This fiber is essentially a complex carbohydrate that resists digestion in the human small intestine. Instead, it reaches the colon intact, where it serves as a substrate for beneficial gut bacteria, promoting digestive health. Starch-derived fiber is utilized in various food products and supplements to enhance their nutritional value, adding fiber without significantly impacting taste or texture. It plays a vital role in the food industry due to its functional properties, contributing to both health and product quality.

In recent years, the demand for starch-derived fiber has surged in response to the growing awareness of the importance of dietary fiber in maintaining a healthy lifestyle. Consumers are increasingly seeking natural and functional food ingredients, driving the food industry to incorporate starch-derived fibers into a wide array of products, including baked goods, beverages, and snacks. This trend aligns with the global focus on promoting digestive health, leading to continuous research and development efforts by companies to innovate new fiber-rich products. Additionally, the industry is witnessing advancements in production techniques, making these fibers more accessible and cost-effective, further fueling their widespread adoption in the food and beverage sector.
