According to our (Global Info Research) latest study, the global Starting Drill Bit market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A starting drill is a tool used in machining operations before a regular drill is used. It is also known as a 'leading drill.' As the name 'starting' implies, it is used for initial positioning and chamfering of holes. Starting drills are characterized by a shorter twist section and a 90-degree tip compared to regular drills. This structural feature allows positioning and chamfering to be performed with a high degree of accuracy. In addition, the drill has a good bite when in use, making accurate positioning and chamfering quick and easy. Starting drills are one of the essential tools for machining accuracy.

Depending on the material, drilling holes with a regular drill may cause distortion, but starting drills enable accurate drilling with minimal distortion. Starting drills are also useful for positioning holes before drilling. Accurate positioning improves the accuracy of the drilling operation.
