## Abstracts

According to our (Global Info Research) latest study, the global Starved Lead-Acid Battery market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Starved lead-acid battery is also called a maintenance-free valve-regulated lead-acid battery. It uses an AGM diaphragm to adsorb the electrolyte. The diaphragm is in a 90% saturated state, so that the electrolyte is not free and will not cause electrolyte overflow. There is no need to add electrolyte during the service life. Its properties are opposite to those of the rich liquid state.
