Abstracts

According to our (Global Info Research) latest study, the global State Space Domain (SSR) Correction Service market size was valued at US$ 288 million in 2025 and is forecast to a readjusted size of US$ 516 million by 2032 with a CAGR of 8.8% during review period.

SSR correction services use GNSS data received by the reference station network to perform physical modeling of the state space. This model is able to simulate various errors in the entire area, including satellite orbit errors, satellite clock errors, ionospheric delays, tropospheric delays, etc. Through modeling, the parameters of the state space model at any given time can be described and sent to users in the modeling area so that they can perform high-precision GNSS positioning. SSR correction services are widely used in fields that require high-precision GNSS positioning, such as autonomous driving, drones, surveying and mapping, agriculture, and navigation. By providing high-precision positioning services, the work efficiency and safety in these fields have been significantly improved.

As an important component of high-precision GNSS positioning, the market size of SSR correction services continues to grow with the widespread application of the Global Navigation Satellite System (GNSS). In particular, in areas that require high-precision positioning, such as autonomous driving, drones, and surveying and mapping, the demand for SSR correction services has increased significantly. SSR correction services simulate errors in the entire region through physical modeling of state space, and broadcast a single correction data stream for the entire service area to users. This technical route can provide reliable services at a relatively low reference station density while supporting an unlimited number of users, which is very suitable for mass market

applications. Algorithms such as PPP (Precise Point Positioning) and PPP-RTK (Real-time Precise Point Positioning) in SSR correction services significantly improve the accuracy of GNSS positioning by separating and correcting various error sources, such as satellite clock error, satellite orbit error, ionospheric delay, etc. It is expected that in the next few years, with the rapid development of industries such as autonomous driving and drones and the increasing demand for high-precision positioning in the mass market, the SSR correction service market will maintain a sustained growth trend.
