## Abstracts

The global Static Avalanche Barrier market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

**Avalanche Barrier:** The main part of the avalanche barrier is based on high-strength steel mesh that extends across the slope to the snow surface. The support created by the holding surface prevents climbing into the snow and the snow sliding on the terrain surface. Thus, the occurrence of avalanches is prevented in the triggering zone and the resulting snow movement is limited to harmless areas. The force generated by the snow pressure is absorbed by the snow net and transferred to the anchor point through the swivel post and anchor rope.

This report studies the global Static Avalanche Barrier production, demand, key manufacturers, and key regions.
