According to our (Global Info Research) latest study, the global Static CT market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Static CT is defined as the sixth generation CT in the history of CT development. Using a new imaging method, it is an innovative slip-ring-free multi-source CT that can obtain ultra-high speed, ultra-low radiation dose imaging characteristics and ultra-high-definition images, leading CT to enter the mesoscopic imaging stage. The core components of the static CT include a detector ring and a ray source ring. The detector ring is configured with a ring detector, which is composed of multiple photon flow detectors.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
