## Abstracts

The global Static CT market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

Static CT is defined as the sixth generation CT in the history of CT development. Using a new imaging method, it is an innovative slip-ring-free multi-source CT that can obtain ultra-high speed, ultra-low radiation dose imaging characteristics and ultra-high-definition images, leading CT to enter the mesoscopic imaging stage. The core components of the static CT include a detector ring and a ray source ring. The detector ring is configured with a ring detector, which is composed of multiple photon flow detectors.
