Static Eliminating Air Guns produce an ionized air stream that neutralizes static charge and removes dust and debris from objects and surfaces. They prevent dust from clinging to surfaces, prevent parts from sticking together, and eliminate static discharges that can damage sensitive electronic components. Also called ionizing blow guns, they are often used to prepare surfaces for painting or finishing and to clean parts prior to assembly, packaging, and labeling. They connect to a compressed air source to create an air stream like a standard air gun, and to a specialized power source to add ions to the air stream. Airless Ionization Wands neutralize static charge without the need for compressed air. They are installed inside manufacturing machinery to clean and remove ions from thin materials that are susceptible to damage from air streams.
