According to our (Global Info Research) latest study, the global Static Light Scattering Particle Size Analyzers market size was valued at USD 235.6 million in 2023 and is forecast to a readjusted size of USD 375.7 million by 2030 with a CAGR of 6.9% during review period.

Static Laser Light Scattering is an established and precise measurement technique for the particle size characterization of both dry and wet samples. Static light scattering is a phenomenon that occurs when light interacts with particles. It produces characteristic angle-dependent patterns in which light is preferentially scattered by the particles in certain directions. Scattering angle and intensity depend on the size of the particles involved. Therefore, static light scattering can be used to measure particle size distributions when an ensemble of particles is illuminated with a laser beam and the resulting light scattering pattern is recorded over a wide angular range.

Global key players of Static Light Scattering Particle Size Analyzers include Malvern Panalytical, Anton Paar, Dandong Bettersize, etc. The top three players hold a share over 51%.

Asia-Pacific is the largest market, has a share about 48%, followed by Europe and North America, with share 21% and 23%, separately.

In terms of product type, Wet Method is the largest segment, occupied for a share of 76%, and in terms of application, Chemical Industry has a share about 23%.
