According to our (Global Info Research) latest study, the global Static Random Access Memory market size was valued at USD 386.9 million in 2023 and is forecast to a readjusted size of USD 331.1 million by 2030 with a CAGR of -2.2% during review period.

SRAM (static RAM) is random access memory (RAM) that retains data bits in its memory as long as power is being supplied. Unlike dynamic RAM (DRAM), which stores bits in cells consisting of a capacitor and a transistor, SRAM does not have to be periodically refreshed. Static RAM provides faster access to data and is more expensive than DRAM. SRAM is used for a computer's cache memory and as part of the random access memory digital-to-analog converter on a video card.

The major players in global Static Random Access Memory market include Cypress, Renesas, etc. The top 2 players occupy about 60% shares of the global market. North America and Japan are main markets, they occupy about 90% of the global market. Synchronous SRAM is the main type, with a share about 30%. Automotive Electronics is the main application, which holds a share about 45%.

The Global Info Research report includes an overview of the development of the Static Random Access Memory industry chain, the market status of Networking (NVSRAM, Asynchronous SRAM), Aerospace (NVSRAM, Asynchronous SRAM), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Static Random Access Memory.
