Abstracts

SRAM (static RAM) is random access memory (RAM) that retains data bits in its memory as long as power is being supplied. Unlike dynamic RAM (DRAM), which stores bits in cells consisting of a capacitor and a transistor, SRAM does not have to be periodically refreshed. Static RAM provides faster access to data and is more expensive than DRAM. SRAM is used for a computer's cache memory and as part of the random access memory digital-to-analog converter on a video card.

Scope of the Report:

This report focuses on the Static Random Access Memory (SRAM) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The global SRAM market is relatively concentrated, and majorly dominated by the large international players in the market. The market is highly capital-intensive, which poses a stiff challenge to local players. These players find it difficult to compete with international vendors in terms of technology, specifications, and services. The top six companies operating in the global SRAM market are Cypress, Renesas, ISSI, GSI, IDT and Samsung. The world's largest manufacturer is Cypress which accounted for approximately 42.29% of the global revenue of SRAM in 2016.

In terms of geography, the USA region led the global SRAM industry and accounted for approximately 76.98% of the market in 2016, in terms of revenue, and USA will continue to lead the market in the future.

The worldwide market for Static Random Access Memory (SRAM) is expected to grow at a CAGR of roughly -2.0% over the next five years, will reach 370 million US\$ in 2023,

from 420 million US\$ in 2017, according to a new GIR (Global Info Research) study.
