Static Screen Filter is an unpowered solid-liquid separation device designed for the removal of suspended solids from wastewater, sewage and industrial liquids. The device uses gravity to filter larger solid particles through a stainless steel screen or wedge screen to achieve efficient, low-maintenance filtration. Static screen filters are simple in design, have no moving parts, require low maintenance, have low operating costs and are suitable for continuous operation. They are commonly used in industries such as sewage treatment, food processing, papermaking and chemicals to effectively reduce the solid load in sewage treatment systems and extend equipment life.
