## Abstracts

The global Stationary Exhaust Extraction System market size is expected to reach \$ 65.95 million by 2032, rising at a market growth of 9.0% CAGR during the forecast period (2026-2032).

In 2025, global Stationary Exhaust Extraction System approximately 15,174 units, with an average global market price of around US\$ 1937 per unit. Gross margin is about 49%. The cost is 988 usd. The Production is about 25,000 units. The Production is about 70 k units. Stationary Exhaust Extraction System is a system designed to remove and filter exhaust fumes from stationary sources such as vehicles, machinery, or equipment. These systems are commonly used in indoor environments like automotive repair shops, fire stations, and industrial facilities where vehicles or equipment run for extended periods, emitting exhaust gases.

In the future, fixed exhaust extraction systems will evolve toward higher energy efficiency, improved sealing performance, and integrated control of multiple pollutants. As occupational health and environmental standards become more stringent, systems will increasingly incorporate high-efficiency, low-noise fans, optimized ducting layouts, and more reliable connection seals to enhance capture efficiency while reducing energy consumption. With the growing adoption of hybrid and alternative-fuel vehicles, fixed systems will expand beyond traditional exhaust removal to address intermittent emissions, brake dust, and thermal airflow management, becoming integrated workstation ventilation solutions. In addition, modular designs and basic digital monitoring features will improve system adaptability and operational manageability, ensuring continued relevance in small-scale and specialized facilities.
