## Abstracts

Generators are devices that convert mechanical energy into electric energy. The source of mechanical energy can vary from internal combustion engine, hand crank, compressed air, and reciprocating steam engine. Internal combustion engines use diesel, gasoline, propane gas, and natural gas to produce mechanical energy, and this mechanical energy is converted into electric energy with the help of generators.

Scope of the Report:

This report focuses on the Stationary Generator in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Demand from industries in the emerging economies is driving the growth of the stationary generator market. One major advantage of stationary generators is that they offer backup power for a long duration, unlike portable generators which provide temporary power backup solution.

Industries in developing countries such as China, India, and Brazil show immense market potential for the adoption of stationary generators. As a result, vendors are venturing into developing countries, where demand for these generators is growing significantly.
