According to our (Global Info Research) latest study, the global Stationary Oxygen Concentrators market size was valued at USD 715.1 million in 2023 and is forecast to a readjusted size of USD 1133 million by 2030 with a CAGR of 6.8% during review period.

An oxygen concentrator is a medical device which is designed to deliver a concentrated flow of oxygen to a patient. The air from an oxygen concentrator has a higher concentration of oxygen than the surrounding ambient air, but the device does not rely on the use of oxygen tanks. There are a number of reasons to use an oxygen concentrator with a patient, and these devices are subject to varying degrees of regulation, depending on where they are being used. With an oxygen concentrator, the device pulls air into a chamber which absorbs nitrogen. The oxygen-rich air is routed through a tube to the patient, while the nitrogen is vented harmlessly. Depending on the size of the device, it can filter and concentrate varying amounts of air per minute.

Currently in the market there are two primary types of oxygen concentrator: portable & stationary. In this report we mainly analyze the market of stationary oxygen concentrator.
