The global Stationary Wave Machines market size is expected to reach \$ 440 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

A Stationary Wave Machines, also known as a surf simulator, is a specialized device or system designed to replicate the experience of riding ocean waves in a controlled and stationary environment. These surf simulators are often used in water parks, surf parks, leisure facilities, and urban locations where access to natural waves may be limited.

Stationary wave machines use advanced wave-generation technology to create a standing wave in a specially designed pool or chamber. This technology typically involves the use of high-speed water jets. Operators can control and adjust various wave parameters, including wave height, speed, and shape, to accommodate surfers of different skill levels and preferences. The riding surface of the simulator is designed to replicate the feel of a surfboard on water, helping surfers practice balance, positioning, and maneuvering skills.

Stationary wave machines provide a convenient and accessible way for people to experience the thrill of riding waves, regardless of their proximity to natural surf spots. They have gained popularity in urban and landlocked areas where traditional surfing opportunities are limited. These simulators offer a fun and controlled environment for surfers to practice and enjoy the excitement of surfing. In 2025, global Stationary Wave Machines production reached approximately 575 units, with an average global market price of around 542 k USD/unit. The production capacity for Stationary Wave Machines in 2025 was approximately 800 units. The typical gross profit margin for Stationary Wave Machines between 20% and 40%.

The global stationary wave machine market is primarily driven by the growing popularity of surfing, increasing demand for experiential entertainment, the development of urban indoor surf venues, and continued investment in upgraded attractions at water parks and resorts. Compared with large artificial surf lagoons, stationary wave machines generally require less space, involve shorter construction cycles, support continuous operation, and can be more easily integrated into urban commercial developments, making them an increasingly important category for both recreational surfing and professional training. As demand for more realistic surfing experiences increases, the market is evolving from traditional shallow-water high-speed flow systems toward deep-water standing waves, adjustable wave profiles, and professional training-grade equipment. Modular design, intelligent control, lower energy consumption, and improved operating efficiency per unit of space are also becoming key areas of product development. The market is expected to expand further as more surf clubs, urban sports and entertainment centers, and integrated resort projects adopt stationary surfing facilities.

This report studies the global Stationary Wave Machines production, demand, key manufacturers, and key regions.
