According to our (Global Info Research) latest study, the global Stator Cooling Water Mixed Bed Resin market size was valued at US\$ 33.96 million in 2025 and is forecast to a readjusted size of US\$ 44.31 million by 2032 with a CAGR of 3.9% during review period.

Stator Cooling Water Mixed Bed Resin is a high-purity water treatment material specifically designed for use in the internal cooling water systems of large-scale generator stators. Composed of cation and anion exchange resins mixed in specific proportions, it is primarily utilized for the deep removal of trace metal ions and conductive impurities from water.

The upstream sector primarily comprises raw materials essential for resin synthesis and regeneration including styrene, divinylbenzene, sulfuric acid, chloromethyl ether, trimethylamine, sodium hydroxide, and hydrochloric acid. The midstream sector involves ion exchange resin manufacturers undertaking processes such as the synthesis of strong-acid cation and strong-base anion resins, as well as subsequent refining, functionalization, and pre-mixing stages. The downstream sector is predominantly applied in the internal cooling water systems of large-scale generators; by removing ionic impurities, regulating pH levels, reducing electrical conductivity, and mitigating copper ion corrosion, it ensures the stable operation of the hollow copper conductors and the cooling water circulation loop.

In 2025, the global sales volume of mixed-bed resin for internal cooling water treatment is projected to reach approximately 2,200 m³, with an average global market price of approximately US\$15,000 per cubic meter. The gross profit margins for major

manufacturers within the industry are expected to range between 35% and 50%.
