According to our (Global Info Research) latest study, the global Stators and Rotors for High Speed Motor market size was valued at USD 1193 million in 2023 and is forecast to a readjusted size of USD 1714.9 million by 2030 with a CAGR of 5.3% during review period.

The stator and rotor of a high-speed motor are important components of the motor.

The stator is the fixed part of the motor, which usually consists of a set of windings and an iron core. A stator winding is a coil of insulated copper wire or other conductive material through which an electric current generates a magnetic field. The structure and arrangement of the stator winding determine the working characteristics and performance of the motor.

The rotor is the rotating part of an electric motor and usually consists of a set of conductors and an iron core. The rotor conductors, usually made of conductive material, are rotated in a magnetic field by an electric current to generate force and torque. The structure and geometry of the rotor have a great influence on the power, efficiency and stability of the electric motor.

For high-speed motors, the design and manufacture of stators and rotors is critical. Due to the requirement of high-speed operation, the stator and rotor need to have high strength, high rigidity and good dynamic balance performance. In addition, the stator and rotor of high-speed motors also need to consider factors such as reducing vibration and noise, improving heat dissipation, and corrosion resistance.

Global 3 largest manufacturers of Stators and Rotors for High Speed Motor are BYD, Changying Xinzhi and Nidec, which make up over 35%. Among them, BYD is the leader with about 21% market share.
