According to our (Global Info Research) latest study, the global Steady State Permeameter market size was valued at US\$ 1314 million in 2024 and is forecast to a readjusted size of USD 1851 million by 2031 with a CAGR of 5.1% during review period.

A Steady-State Permeameter is a laboratory instrument used in soil mechanics and geotechnical engineering to measure the hydraulic conductivity (permeability) of soil samples. Hydraulic conductivity is a crucial property that determines how easily water can flow through a soil medium. Steady-state permeameters are designed to provide controlled conditions for conducting experiments that involve the flow of water through a soil specimen.

Steady-State Permeameters are increasingly equipped with digital controls and data acquisition systems. Automation allows for more precise control of flow rates and pressure measurements, reducing human error and improving repeatability.
